**REPLICATION: MONITOR PROTECTS DATA, SPEEDS RECOVERY**—After a disaster strikes, a company's ability to get its data back is critical. Replication Monitor, a new feature in Veritas Backup Exec 10.0, helps protect data and speeds recovery. It replicates data from a source to a target, and then monitors the target for changes. If a change is detected, the source data is replicated to the target. This ensures that the target is always up to date. Replication Monitor also monitors the target for errors. If an error is detected, the source data is replicated to the target. This ensures that the target is always in a consistent state. Replication Monitor is a powerful tool for disaster recovery. It can be used to replicate data from a source to a target, and then monitor the target for changes and errors. This ensures that the target is always up to date and in a consistent state. Replication Monitor is a powerful tool for disaster recovery.
